The first major revision, AutoCAD 2, was released in 1984. This was followed by AutoCAD 2R3 in 1985 and AutoCAD 2R4 in 1986. The last major release of AutoCAD was AutoCAD 3 in 1988, which was discontinued in 1997. The current version of AutoCAD is 2019. AutoCAD is generally considered to be one of the most complex CAD applications, and with a few exceptions, the CAD industry has not provided the features needed to meet the challenges of complex design work. In addition, while offering powerful features, AutoCAD can be difficult to learn, especially for beginners, and the numerous available features can leave users unsure of how to approach a complex design task. However, AutoCAD has an extensive feature set, with many options, and it is the default CAD program in almost every graphic design company. While it is one of the more powerful CAD applications, it lacks many of the features available in free CAD programs. AutoCAD was created by Bill Gates and Paul Allen in the late 1970s, when Bill Gates and Allen were working at the DEC PDP-10 division of Digital Equipment Corporation. A desk-top AutoCAD drawing using a mouse The first Autodesk sponsored product in 1982 was a desktop CAD system for use with the MicroVAX minicomputer, the first computer to run the OS/2 operating system. The MicroVAX CAD was designed to run on a desktop personal computer (PC) with a Raster Graphics Adapter (RGA) and was introduced in September 1983. The system was a fast, if not the fastest, RGA-enabled CAD application available at the time. In 1984, AutoCAD 1.0 was introduced, marking the first time that a PC-based CAD application was developed and marketed by Autodesk. The system was written in Turbo Pascal, with a user interface similar to that of the MicroVAX CAD. The AutoCAD 1.0 system was designed to run on a PC, with a card-based RGA. At the time of the introduction, AutoCAD was the only PC-based CAD application available. In 1985, however, Adobe launched its now-famous Photoshop design tool. Despite the introduction of Photoshop, there was still a demand for a good CAD application for PC-based design work. In the late 1980

CAD rendering for AutoCAD is provided by native and third-party rendering products that extend AutoCAD's rendering engine. One example of a native product is Arcadis Rendering, which is available on the AutoCAD App Store. AutoCAD 2014 introduced a Mobile App for iPhone and iPad and a native Android app. In addition, AutoCAD mobile solutions are available for Android, Windows Phone, and BlackBerry. In 2016, AutoCAD 2013 was replaced by AutoCAD 2014, introduced new features, and brought native mobile support. AutoCAD Express The free version of AutoCAD is AutoCAD Express. AutoCAD Express 2019 for Mac, Windows 10, iOS/Android/tablet and CADcloud for Mac, Windows and iOS/Android/tablet is free to download with paid software subscription. The product includes basic and professional capabilities, such as 2D and 3D drawing and technical and management functions. The process of creating 2D drawings is similar to that of creating a simple drawing in Microsoft Word or Illustrator. More professional capabilities include the 3D geometric modeling of architectural, mechanical, and infrastructure (civil) projects. In AutoCAD R2014 this area has been named AutoCAD Architecture (Batch-Job)and was first released in 2010 in AutoCAD R2013. The software includes functionality to create powerful reports, such as PDF and AutoCAD eDrawings. It allows the saving and emailing of drawings, the creation of watermark logos, and the creation of engineering and technical reports. The technical reports created using AutoCAD are compatible with the industry standard 4th edition DIA / DDC format. The architectural and engineering reports can be used in the creation of architectural and engineering project proposals. AutoCAD for Mac The AutoCAD for Mac product includes several types of 2D drafting, such as 2D and 3D drafting, drafting and design, drawing creation, and CAD data processing. In addition, this product includes 3D drafting, design and analysis, report creation and visual analytics. The software also includes a platform for enhanced content (CAD Clouds), several industry-standard CAD formats (a1d647c40b

I am trying to match nested subgroups in a bigger regex. The pattern to look for is something like this (a set of tags can be combined with the | symbol): +>+ + The result should be a match for: This is my regular expression so far: (?x) ((?]]>+ 1 (?)+ 1 (?)+) This works fine.
